Elton™ Carrier for NVidia® AGX Xavier™

Elton™ utilizes the NVIDIA® Jetson™ AGX Xavier™ embedded computer module to deliver unmatched performance for AI, machine learning, image processing, and other compute-intensive tasks.

Elton provides numerous sockets for I/O expansion. An industry-standard camera module socket supports the attachment of up to 8 CSI cameras (up to 4 cameras with 4K resolution). An M.2 socket supports the use of PCIe x4 NVMe flash storage up to 256GB. An LTE module socket supports the use of NimbeLink SkyWire cellular modems, featuring a broad range of solutions with worldwide compatibility. Most notably, a full PCI/104-Express expansion socket enables the use of PCI-104 and PCIe/104 expansion modules with up to PCIe x8 bandwidth.

All I/O is provided on pin headers that are compatible with both common non-latching and rugged latching mating cables, making Elton ideal for applications in environments subject to high shock and vibration.

Jetson AGX Xavier

The NVIDIA Jetson AGX Xavier is an embedded system-on-module that integrates an NVIDIA 8-core Carmel 64-bit ARM-8 CPU with a 512-core Volta GPU with Tensor Cores. It includes dual Deep Learning Accelerators, 16GB 256-bit LPDDR4 RAM with 137GB/s bandwidth, 16 lanes of PCIe, and 16 MIPI CSI-2 camera lanes.

NVidia Meets PC/104

Unique among NVIDIA computing module carriers, Elton employs a PCI/104-Express expansion socket. The socket provides support for PCI-104, PCIe/104 type 2 (x8 lane), and PCIe/104 OneBank expansion modules (4 x1 lanes), enabling rapid creation of truly rugged, custom-configured, high performance, PCIe-based solutions using off-the-shelf I/O modules from a large number of manufacturers worldwide. Typical PCIe/104 I/O expansion includes 1G/10G Ethernet, video capture, and high-resolution video display.
Elton™ Carrier for NVidia® AGX Xavier™

Data Acquisition
A built-in data acquisition circuit provides 12-bit A/D up to 1MSPS, 12-bit D/A, and 3.3V GPIO. Diamond’s free C-language programming library simplifies application development, while a GUI control panel offers convenient control and monitoring of real-world processes as well as ready-to-run data logging capability.
