Lanner

NVIDIA® CERTIFIED
Reliable, Powerful NGC-Ready Edge AI
Low-latency Edge AI Solution Featuring GPU-Accelerated Computing

Lanner and NVIDIA create edge platform for AI inference & Video

NVIDIA®

Lanner

NVIDIA T4 GPU Performance

Single-Precision:	**8.1 TFLOPS**
Mixed-Precision: (FP16/FP32)	**65 TFLOPS**
INT8:	**130 TOPS**
INT4:	**260 TOPS**

Advanced AI applications now face fundamental challenges in latency, reliability & solution delivery, accessible edge AI systems that can be deployed with existing core IT infrastructure are now key AI enablers

The accelerating deployment of powerful AI solutions in competitive markets has evolved hardware requirements down to the very edge of our networks. Harnessing existing IT workflows is instrumental to edge-ready solutions capable of closing complex gaps between core business IT investments, competencies and upcoming AI opportunities.
Designed and built in-house by Lanner for secure remote operation and accelerated workloads with the Tesla T4 Tensor core GPU, the LEC-2290E is validated and edge-ready out-of-the-box for streamlined NGC deployments. NVIDIA GPU CLOUD (NGC) fast-tracks edge AI solutions with its comprehensive catalog of containerized software GPU-optimized for edge-to-core solutions.
Key product benefits

- Purpose-built AI hardware
- NGC-Ready Edge Appliance
- Cloud native software stack supported
- Highly scalable
- Built-in security
- Performance optimized

Programmability	Low Latency	Accuracy	Network Size	Throughput	Efficiency	Rate of Learning

Raw throughput is just one of seven factors to consider in the overall evaluation of a system.
To get a complete picture of its performance you must take into account all of the above.

Reliable Intelligence from the edge, Sʊ᷄Uʌ᷄Yˇ᷄XYdˋcmᴈ Yʙhfrom the Core

Data center-class deep learning, machine learning, and high-performance compute technologies from edge-to-core using Docker containers for powerful and easy-to-deploy IT infrastructure that scales any edge deployment

NGC-Ready Supported Software Highlights

PRETRAINED MODELS

DL/ML HPC APPLICATION CONTAINERS

CONTAINER RUNTIME

NVIDIADRIVER

HOST OS

NVIDIA CUDA — CUDA is a parallel computing platform and programming model that enables dramatic increases in computing performance by harnessing the power of the NVIDIA GPUs.

NVIDIA DEEPSTREAM — DeepStream SDK delivers a complete streaming analytics toolkit for AI based video and image understanding and multi-sensor processing.

NVIDIA TENSORRT — NVIDIA TensorRT is a C++ library that facilitates high-performance inference on NVIDIA graphics processing units (GPUs).
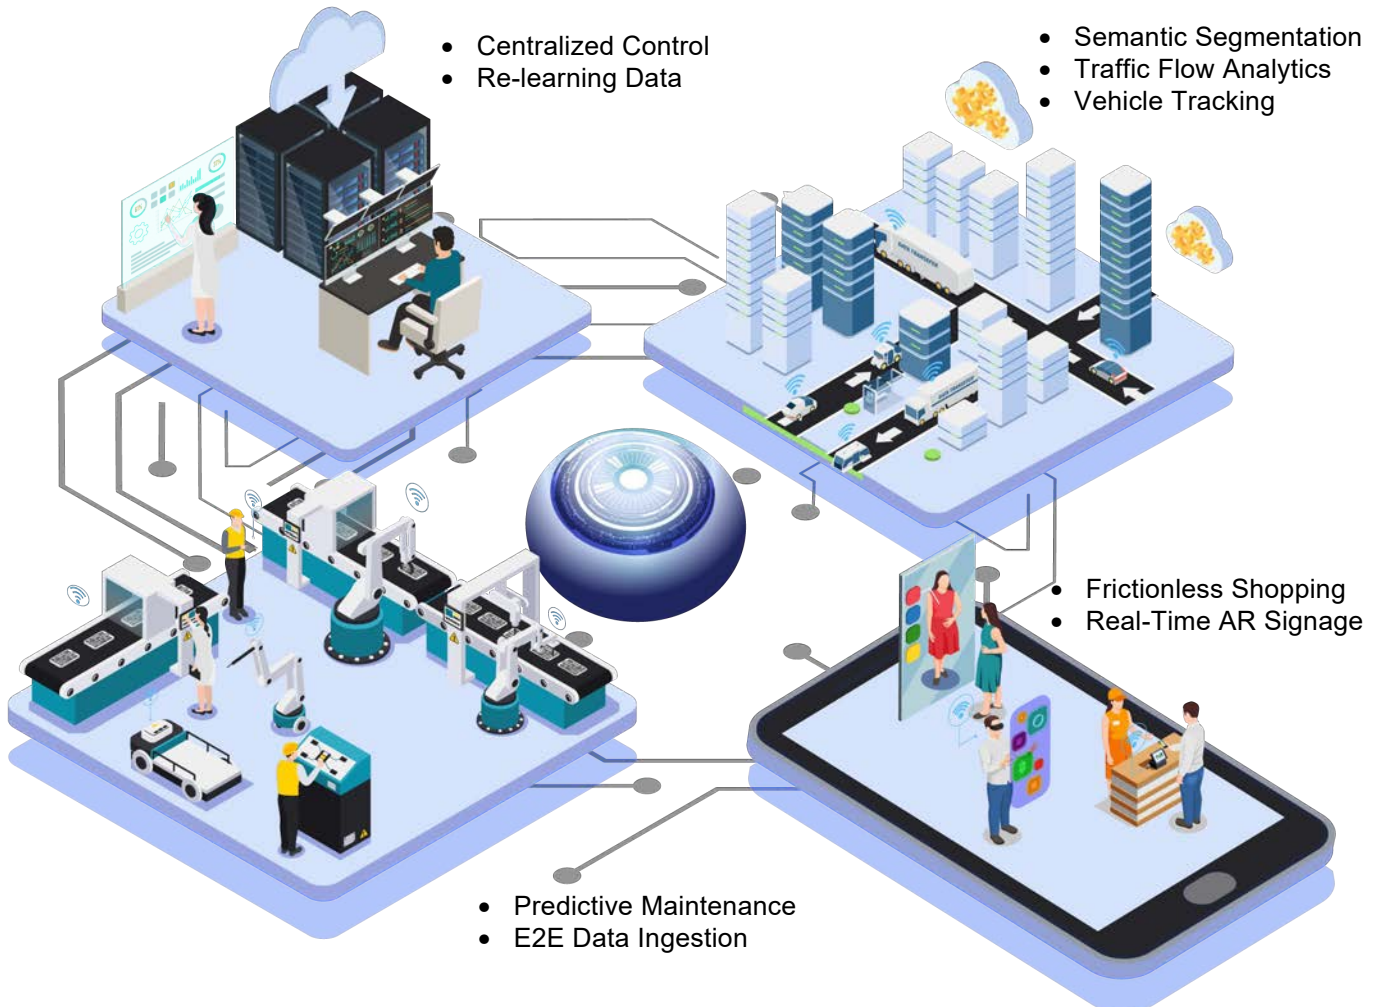

TensorFlow — TensorFlow is an open-source software library for high-performance numerical computation. Its flexible architecture allows flexible, easy deployment.

mxnet

RAPIDS

PyTorch

NVIDIA NVCAFFE

NVIDIA TRITON INFERENCE SERVER

From increasingly autonomous manufacturing, to smarter roads and retail outlets, scalable HPC inference opens the floodgates to the litany of disruptive AI:

- Centralized Control
- Re-learning Data

- Semantic Segmentation
- Traffic Flow Analytics
- Vehicle Tracking

- Frictionless Shopping
- Real-Time AR Signage

- Predictive Maintenance
- E2E Data Ingestion

Lanner 2290E Targeted Application Segments: Retail, Manufacturing, Smart Cities

From 2020-2025 AI is expected to grow by 25 billion in retail, manufacturing, and smart cities, with the demand for better, faster AI edge processing at its highest point. Below are examples of how an NGC-ready system can be utilized within these industries to bring cost-effective optimizations and valuable insights for today.

Intelligent Retail

With AI-enabled intelligent stores, retailers are reducing shrinkage, eliminating stockout, and gaining visibility into in-store customer behavior to optimize merchandising. These stores leverage data from cameras and sensors to provide valuable analytics that enable smart decision-making, improve operations, and increase efficiency. Additionally, the same infrastructure can be used for a faster customer checkout experience, including fully automated checkout systems.

Application Segments: In-store analytics, autonomous shopping, asset protection, customer experience

Efficient Manufacturing

The flexibility of automation and fast-paced technologies like 3D printing and ecommerce have greatly increased capabilities & diversity, along with overall complexity for manufacturers. To meet these demands manufacturers are relying on powerful AI to increase efficiency and improve logistics.

Cutting edge AI implementations have enabled some of the largest manufacturers to manage the immense influx of millions of parts around the world every day. Machine vision driven robotics have optimized manufacturing of increasingly intricate and personalized products.

Application Segments: Manufacturing & logistics

Smart Cities

Populous cities are deploying powerful autonomous AI solutions to reduce expenditure and increase revenue streams.

Problems like vehicle-tax collection on such scales require machine vision AI solutions that can handle traffic monitoring and vehicle/license plate recognition. Rising public safety concerns with the ongoing pandemic have accelerated the creation and real-world deployment of crowd and safety equipment detection solutions.

Application Segments: Traffic control, crowd detection

LEC-2290E

LEC-2290E AI Starter Kit w/
Following Order Information

■ Hardware Configuration

- Intel® Xeon™ E-2278GEL 8C/16T
- NVIDIA T4 Tensor Core GPU for AI acceleration
- 64GB Wide temp SODIMM, 128Gb mSATA and 2.5" 256Gb SATA
- TPM 2.0 and IPMI modules
- 270W AC to DC adapter
- GPU Thermal Kit

■ Specifications

System Processor

CPU	Socketed Intel® Xeon™ E-2278GEL
Frequency	2.0GHz, 3.9 GHz Turbo
Core Number	8C/16T
BIOS	AMI 256Mbit SPI Flash
Chipset	BIOS FH82C246

Memory

Technology	DDR4 2133/2400 SO-DIMM
Capacity	2x32GB Wide temp (64GB Max)
Socket	2x 260-pin SO-DIMM

Graphic

Controller	Intel® UHD Graphics 630
HDMI	2

Audio

Codec	TSI 92HD73C
Interface	1x Mic-in, 1x Line-out

Ethernet

|	
Controller	Intel i210IT
Speed	10/100/1000 Mbps
Interface	2x GbE RJ45, 4x PoE RJ45 @IEEE 802.3at (Total PoE Budget of 60W)

Storage

Type(s)	SATA
Expansion	2x Removable HDD/SSD External Slot w/ RAID

I/O

Serial Port	6x D-Sub RS232/422/485
Digital I/O	8x DI, 8x DO (12V@100mA)
USB 2.0	-
USB 3.0	4x Type A
Power-On/Reset Button	1x Power-On, 1x Reset Button
Remote Power Switch	1x 2-pin Remote Power Switch
LED	Power/Storage/LTE/Wifi

Mechanical

Dimension (W x H x D)	275 x 115 x 225 mm
Construction	Aluminum Extrusion & SGCC
Mounting	Wallmount

Tesla T4 Tensor Core GPU

GPU Architecture	NVIDIA Turing
NVIDIA Turing Tensor	320
NVIDIA CUDA® Cores	2,560
GPU Memory	16 GB GDDR6, 300 GB/sec
ECC	Yes
Interconnect Bandwidth	32 GB/sec
System Interface	x16 PCIe Gen3
Thermal Solution	Passive
Power	70W
Compute APIs	CUDA, NVIDIA TensorRT™, ONNX

Expansion Interface

Mini-PCIe	1x Mini-PCIe (PCIe + USB2.0) w/ Nano-SIM
PCIe	1x PCIe *16 (In Use)
M.2	1x B Key M.2 w/ Nano-SIM

Misc

Watchdog Timer	Yes
TPM	TPM 2.0
IPMI	Yes

Power

Power Type	ATX
Power Supply Voltage	9~30 V_{DC}
Connector	1x 4-pin Terminal Block

Environment

Operating Temperature	-20°C~55°C (35W CPU)
	(0°C~35°C is recommended to avoid Tesla T4 thermal throttling and maintain compliance with NVIDIA® warranty policy)
Storage Temperature	-40°C~70°C
Relative Humidity	10%~90% (Non-condensing)
Vibration	IEC 60068-2-64, 0.5Grms, random 5 ~500 Hz, 40 mins/axis

NVIDIA NGC-Ready System

Built-in hardware security and manageability

Hardware security is a major concern in edge deployment scenarios, with hardware-enhanced security being the gold-standard for professional-grade edge solutions. The LEC-2290E uses an Intel Core i7 or Xeon CPU, bringing numerous security enhancing and accelerating features. On-board TPM 2.0 for security and IPMI module for Manageability.

Intelligent Platform Management Interface (IPMI): IPMI offers system administrators to manage and monitor computing platforms with standardized interface and protocol. Due to its messaging and hardware-based nature, IPMI works independently from the operating system, so that system administrators are able to remotely manage and monitor computing platform status.

Trusted Platform Module (TPM): The TPM is a secure crypto-processor that assist with functions such as generating, storing and limiting the use of cryptographic keys. Keys generated by this crypto-processor provide tamper resistance at the hardware-level.

Performance and power efficiency at the very edge

NVIDIA T4 enterprise GPUs supercharge the world's most trusted mainstream servers. Its low-profile, 70-watt (W) design is powered by NVIDIA Turing™ Tensor Cores, delivering revolutionary multi-precision performance to accelerate a wide range of modern applications, including machine learning, deep learning, and virtual desktops.

Small-form-factor, 70-watt (W) GPU design: NVIDIA T4 optimized for scale-out servers, providing an incredible 50X higher energy efficiency compared to CPUs, drastically reducing operational costs. In the last two years, NVIDIA's inference platform has increased efficiency by over 10X, and it remains the most energy-efficient solution for distributed AI training and inference.

Data center class edge GPU: The T4 is an ideal universal accelerator for distributed edge computing environments. Revolutionary multi-precision performance accelerates deep learning and machine learning training and inference, video transcoding, and virtual desktops. NVIDIA T4 supports all AI frameworks and network types, delivering dramatic performance and efficiency that maximize the utility of at-scale deployments.

Lanner

About Lanner

Founded in 1986, Lanner is an ISO 9001 accredited organization with headquarters in Taipei, Taiwan, and offices in USA, Canada, and China. With over 30 years of experience in system and board hardware engineering, Lanner provides high-performance, reliable, and cost-effective computing platforms. Lanner is most renowned for its range of Intel architecture-based and RISC network appliances.

Lanner Electronics Inc. (TAIEX 6245) provides design, engineering, and manufacturing services for advanced network appliances and rugged applied computing platforms for system integrators, service providers, and application developers.
